

# Beginners

**Our beginner level photography course is divided into 4 modules.**

**Module 1** covers up the **fundamentals** of photography. This module will cover up everything from DSLR menus to photography rules. After completing this module you will be shooting confidently in manual mode.

**Module 2** covers up the **lighting basics**. From outdoor lighting to indoor lighting techniques, using flashes and reflectors. Everything you should know about photography lighting techniques is included in this module. The lighting module will give you a good brief about the basics of indoor-outdoor lighting.

**Module 3 Photo shoot** with our models. This is the most interesting module for our students, because they get to shoot with our professional models. They can practice the techniques they have learnt during the entire course and take some amazing professional looking images without models.

**Module 4** is **post processing**. Yes, we cover Photo editing also, as now a day digital editing is a must thing. To get those edgy looks and for giving professional touch-up what you need to learn has been included in this module. Understand have a hand on experience for using Photoshop.
